

KAREEM SINGLETON

AI Automation Engineer | Workflow Systems & Integrations

Philadelphia, PA | kareem.s.singleton@gmail.com | 267-546-7048 | linkedin.com/in/kareem-singleton-5b795a386

SUMMARY

Automation engineer who builds and ships working systems, not just prototypes. I design and build Make.com automations, API integrations, and AI-assisted workflows, then test them until they hold up in real use. Recent work includes a lead-scoring and routing system for service businesses, a multi-platform AI conversation archiving tool validated on 27,000+ real entries, and a native iOS app using computer vision for real-time decision support. Comfortable directing AI coding tools (Claude, ChatGPT, Codex) as part of the build process, but the focus is always the finished, working product: does it run, does it hold up, and can someone else use it.

CORE SKILLS

- Automation & Integration: Make.com, REST APIs, webhooks, OAuth/token auth, Google Workspace automation, multi-tool routing (Slack, ClickUp, Sheets, email)
- Programming: Python, TypeScript/Next.js, Swift/iOS, Google Apps Script
- Testing & Reliability: End-to-end workflow testing, dedupe/idempotency logic, structured logging, error handling, debug exports, field testing
- AI-Assisted Development: Directing and validating AI-generated code, prompt design, output verification, cross-model comparison (ChatGPT, Claude, Gemini)
- Product & Documentation: MVP scoping, setup/onboarding flows, README and support documentation, non-technical user packaging

EXPERIENCE

Founder & Automation Engineer | Capsule Foundry *Mar 2025 – Present*

- Design and build production automation systems for real use cases, covering lead intake, data processing, conversation archiving, and mobile decision support
- Built and launched AI Lead Filter, a Make.com automation that scores inbound leads and routes them across email, Slack, ClickUp, and Google Sheets in real time, including a live-demo intake flow used in sales conversations
- Built and published AI Memory Card, a Python tool that converts ChatGPT, Claude, and Gemini exports into a searchable Excel archive and portable recall file, validated on 27,000+ parsed entries and packaged with one-click installers for non-technical users
- Built Courier Copilot, a native iOS prototype using ReplayKit screen capture and Vision OCR to extract delivery-offer data and return a GREEN/YELLOW/RED accept decision in real time, with a local test scaffold for validating scoring accuracy
- Maintain a project audit and improvement system (31 audits, 25 documented lessons) used to catch recurring failure patterns and shorten ramp-up time on new builds

AI Automation Engineer (Freelance) | Upwork *2026 – Present*

- Offer Make.com automation builds, API integrations, and workflow fixes to small business clients

Operations Manager | Fairspot / Helium IoT Network *Jan 2021 – Aug 2022*

- Managed uptime and troubleshooting for a distributed network of 240+ IoT devices, maintaining 99%+ uptime
- Built repeatable processes for remote diagnostics, issue escalation, and installation quality across a non-technical host base

Founder & Creative Director | Bothered Otters *Aug 2021 – Dec 2021*

- Built and led an international creative team, growing a digital community to 150K followers and 70K+ Discord members at its peak
- Used audience and engagement data to guide content strategy and prioritize what resonated with the community

EDUCATION & CERTIFICATIONS

B.A. Fine Arts, Technical & Production Focus — Penn State Abington, 2015
